MISSION
The Harvard Environmental Economics Program (HEEP) develops innovative answers to today’s complex environmental issues, by providing a venue to bring together faculty and graduate students from across Harvard University engaged in research, teaching, and outreach in environmental, energy, and natural resource economics and related public policy. The program sponsors research projects, convenes workshops, and supports graduate education to further understanding of critical issues in environmental, natural resource, and energy economics and policy around the world.

RESEARCH
Faculty Fellows and Pre-Doctoral Fellows are actively engaged in research at the frontiers of the field and have made key breakthroughs in economics that are relevant to public policy. A small sampling of current research projects would include international policy architecture for global climate change; the use of market-based instruments for pollution control; the relationship between natural-resource endowments and economic growth; consumer adoption of energy-efficient technology; design of electricity markets; responses of business firms to environmental demands; and valuing environmental risk reductions.

PH.D. PROGRAMS
Pre-Doctoral Fellows pursue the Ph.D. degree in one of five Harvard University programs: economics, political economy and government, public policy, health policy, or business economics. Those interested in pursuing a Ph.D. degree at Harvard focused on environmental economics are encouraged to contact directly one or more of the program offices linked on the HEEP website below:

Harvard has tremendous strength in environmental and natural resource economics, with that capability spread across several schools of the University: the Faculty of Arts and Sciences, the Harvard Kennedy School, and the Schools of Public Health, Business, Design, and Law. Our Faculty Fellows have great expertise and international reputations in environmental, energy, and natural resource economics and have held important positions in the President’s Council of Economic Advisors, the U.S. Environmental Protection Agency, the U.S. Department of the Treasury, the World Bank, the World Health Organization, and the Intergovernmental Panel on Climate Change.

In recent years, Pre-Doctoral Fellows have gone on to become faculty members at Columbia, Duke, Tufts, New York, and Tsinghua (Beijing) Universities; INSEAD and the University of Michigan; and Amherst, Dartmouth, and Colby Colleges; Fellows at Resources for the Future and Columbia University’s Earth Institute; and hold key positions in government agencies—including the White House and the U.S. Energy Information Administration—and non-governmental organizations, including the Environmental Defense Fund.

**SPONSORS**

The Enel Endowment for Environmental Economics at Harvard University provides major support for HEEP. The Endowment was established in February 2007 by a generous capital gift from Enel SpA, a progressive Italian corporation involved in energy production worldwide. HEEP is also supported by the Alfred P. Sloan Foundation, the James M. and Cathleen D. Stone Foundation, the Enel Foundation, Bank of America, Chevron Services Company, Duke Energy Corporation, and Shell. HEEP enjoys an institutional home in and support from the Mossavar-Rahmani Center for Business and Government at the Harvard Kennedy School. HEEP collaborates closely with the Harvard University Center for the Environment (HUCE). The Center has provided generous material support, and a number of HUCE’s Environmental Fellows and Visiting Scholars have made intellectual contributions to HEEP. The closely-affiliated Harvard Project on Climate Agreements is grateful for additional support from the Belfer Center for Science and International Affairs at the Harvard Kennedy School, ClimateWorks Foundation, and Christopher P. Kaneb (Harvard AB 1990).
